
Table of Contents

Preface	xv
----------------------	-----------

Part I. mod_perl Administration

1. Introducing CGI and mod_perl	3
A Brief History of CGI	3
The Apache 1.3 Server Model	13
The Development of mod_perl 1.0	15
Apache 1.3 Request Processing Phases	20
References	24
2. Getting Started Fast	25
Installing mod_perl 1.0 in Three Steps	25
Installing mod_perl on Unix Platforms	26
Configuring and Starting the mod_perl Server	29
Installing mod_perl for Windows	31
Preparing the Scripts Directory	34
A Sample Apache::Registry Script	35
A Simple mod_perl Content Handler	37
Is This All We Need to Know	40
About mod_perl?	40
References	41
3. Installing mod_perl	42
Configuring the Source	43
Building mod_perl (make)	58
Testing the Server (make test)	59

Installation (make install)	62
Installation Scenarios for Standalone	
mod_perl	63
Building mod_perl with Other Components	68
Installing mod_perl with the CPAN.pm Interactive Shell	74
Installing mod_perl on Multiple Machines	76
Installation into a Nonstandard Directory	76
How Can I Tell if mod_perl Is Running?	87
General Notes	89
References	91
4. mod_perl Configuration	92
Apache Configuration	92
mod_perl Configuration	101
The Startup File	119
Apache Configuration in Perl	123
Validating the Configuration Syntax	137
The Scope of mod_perl Configuration Directives	138
Apache Restarts Twice	139
Enabling Remote Server Configuration Reports	140
Tips and Tricks	140
Configuration Security Concerns	141
General Pitfalls	144
References	145
5. Web Server Control, Monitoring, Upgrade, and Maintenance	146
Starting the Server in Multi-Process Mode	146
Starting the Server in Single-Process Mode	146
Using kill to Control Processes	147
Using apachectl to Control the Server	153
Validating Server Configuration	154
Setuid root Startup Scripts	154
Preparing for Machine Reboot	157
Upgrading a Live Server	162
Three-Tier Server Scheme: Development, Staging, and Production	178
Web Server Monitoring	186
Server Maintenance Chores	199

References	215
6. Coding with mod_perl in Mind	217
Before You Start to Code	217
Exposing Apache::Registry Secrets	219
Namespace Issues	226
Perl Specifics in the mod_perl Environment	234
CHECK and INIT Blocks	242
Apache::Registry Specifics	248
Transition from mod_cgi Scripts to Apache Handlers	251
Loading and Reloading Modules	259
Handling the “User Pressed Stop Button” Case	278
Handling Server Timeout Cases and Working with \$SIG{ALRM}	290
Generating Correct HTTP Headers	291
Method Handlers: The Browse and See, Browse and View Example	295
References	302

Part II. mod_perl Performance

7. Identifying Your Performance Problems	307
Looking at the Big Picture	307
Asking the Right Questions	309
References	312
8. Choosing a Platform for the Best Performance	313
Choosing the Right Operating System	313
Choosing the Right Hardware	317
References	322
9. Essential Tools for Performance Tuning	323
Server Benchmarking	324
Perl Code Benchmarking	328
Process Memory Measurements	333
Apache::Status and Measuring Code Memory Usage	335
Code Profiling Techniques	340
References	347
10. Improving Performance with Shared Memory and Proper Forking	349
Sharing Memory	349

Forking and Executing Subprocesses	371
from mod_perl	371
References	382
11. Tuning Performance by Tweaking Apache's Configuration	383
Setting the MaxClients Directive	383
Setting the MaxRequestsPerChild Directive	388
Setting MinSpareServers, MaxSpareServers, and StartServers	389
KeepAlive	389
PerlSetupEnv	390
Reducing the Number of stat() Calls	391
Made by Apache	391
Symbolic Links Lookup	399
Disabling DNS Resolution	400
Response Compressing	401
References	402
12. Server Setup Strategies	403
mod_perl Deployment Overview	403
Standalone mod_perl-Enabled Apache Server	405
One Plain and One mod_perl-Enabled Apache Server	407
One Light Non-Apache and One mod_perl-Enabled Apache Server	413
Adding a Proxy Server in httpd Accelerator Mode	413
The Squid Server and mod_perl	417
Apache's mod_proxy Module	427
mod_rewrite Examples	435
Getting the Remote Server IP in the Backend Server in the Proxy Setup	437
Frontend/Backend Proxying with Virtual Hosts	439
HTTP Authentication with Two Servers and a Proxy	443
When One Machine Is Not Enough for Your RDBMS DataBase and mod_perl	443
Running More than One mod_perl Server	448
on the Same Machine	448
SSL Functionality and a mod_perl Server	450
Uploading and Downloading Big Files	451
References	452
13. TMTOWTDI: Convenience and Habit Versus Performance	453
Apache::Registry PerlHandler Versus Custom PerlHandler	453
Apache::args Versus Apache::Request::param Versus CGI::param	457

Buffered Printing and Better print() Techniques	461
Interpolation, Concatenation, or List	467
Keeping a Small Memory Footprint	470
Object Methods Calls Versus Function Calls	475
Using the Perl stat() Call's Cached Results	479
time() System Call Versus \$r->request_time	479
Printing Unmodified Files	480
Caching and Pre-Caching	480
Caching with Memoize	494
Comparing Runtime Performance of Perl and C	494
References	507
14. Defensive Measures for Performance Enhancement	508
Controlling Your Memory Usage	508
Coding for a Smaller Memory Footprint	512
Conclusion	523
References	524
15. Improving Performance Through Build Options	525
Server Size as a Function of Compiled-in Features	525
mod_status and ExtendedStatus On	526
DYNAMIC_MODULE_LIMIT Apache Build Option	527
Perl Build Options	527
Architecture-Specific Compile Options	528
References	528
16. HTTP Headers for Optimal Performance	529
Date-Related Headers	529
Content Headers	532
Content Negotiation	536
HTTP Requests	536
Avoiding Dealing with Headers	539
References	540

Part III. Databases and mod_perl

17. Databases Overview	543
Volatile Databases	543

Non-Volatile Databases	545
References	549
18. mod_perl Data-Sharing Techniques	550
Sharing the Read-Only Data in and Between Processes	550
Sharing Data Between Various Handlers	551
References	554
19. DBM and mod_perl	555
mod_perl and DBM	557
Resource Locking	558
Flawed Locking Methods	561
Locking Wrappers Overview	563
Tie::DB_Lock	563
Examples	564
References	569
20. Relational Databases and mod_perl	570
Persistent Database Connections	
with Apache::DBI	571
Improving Performance	578
DBI Debug Techniques	581
References	582

Part IV. Debugging and Troubleshooting

21. Error Handling and Debugging	585
Warnings and Errors Explained	585
Debugging Code in Single-Server Mode	596
Tracing System Calls	598
Tracing mod_perl-Specific Perl Calls	599
Debugging Perl Code	603
Analyzing Dumped core Files	631
Hanging Processes: Detection	
and Diagnostics	637
Useful Debug Modules	646
Looking Inside the Server	656
References	661

22. Troubleshooting mod_perl	662
Configuration and Startup	662
Code Parsing and Compilation	665
Runtime	666
Shutdown and Restart	670
23. Getting Help and Online Resources	672
How to Report Problems	673
Mailing List Etiquette	675
Resources	676

Part V. mod_perl 2.0

24. mod_perl 2.0: Installation and Configuration	685
What's New in Apache 2.0	686
What's New in Perl 5.6.0–5.8.0	689
What's New in mod_perl 2.0	691
Installing mod_perl 2.0	694
Configuring mod_perl 2.0	697
Resources	708
25. Programming for mod_perl 2.0	709
Migrating to and Programming with mod_perl 2.0	709
New Apache Phases and Corresponding Perl*Handlers	714
I/O Filtering	728

Part VI. Appendixes

A. mod_perl Recipes	753
Emulating the Authentication Mechanism	753
Reusing Data from POST Requests	753
Redirecting POST Requests	754
Redirecting While Maintaining Environment Variables	755
Handling Cookies	755
Sending Multiple Cookies with the mod_perl API	756
Sending Cookies in REDIRECT Responses	756

CGI::params in the mod_perl Way	756
Sending Email from mod_perl	757
mod_rewrite in Perl	757
Setting PerlHandler Based on MIME Type	759
Singleton Database Handles	760
Terminating a Child Process on Request Completion	762
References	763
B. Apache Perl Modules	764
Development-Stage Modules	765
Modules to Aid Debugging	768
Control and Monitoring Modules	769
Server Configuration Modules	770
Authentication-Phase Modules	772
Authorization-Phase Modules	772
Access-Phase Modules	772
Type Handlers	773
Trans Handlers	773
Fixup Handlers	775
Generic Content-Generation Modules	775
Application-Specific Content-Generation Modules	777
Database Modules	780
Toolkits and Frameworks for Content-Generation and Other Phases	781
Output Filters and Layering Modules	784
Logging-Phase Handlers	788
Core Apache Modules	789
Other Miscellaneous Modules	794
C. ISPs Providing mod_perl Services	800
Users Sharing a Single Web Server	800
Users Sharing a Single Machine	801
Giving Each User a Separate Machine (Colocation)	802
Giving Each User a Virtual Machine	803
D. The Template Toolkit	804
Fetching and Installing the Template Toolkit	804

Overview	805
Typical Uses	805
Template Toolkit Language	807
Processing Templates	810
Apache/mod_perl Handler	813
Apache::Template Module	815
Hangman Application	815
References	834
E. The AxKit XML Application Server	835
Installing and Configuring AxKit	836
Your First AxKit Page	837
Dynamic Content	839
More XPathScript Details	846
XSLT	848
Putting Everything Together	852
More Reasons to Use AxKit	855
F. HTTP Status Codes	856
HTTP/1.0 Status Codes	856
HTTP/1.1 Status Codes	857
References	858
Index	859
